

E-Waste Update report-2021

The Kamala Nehru College has been taking multiple initiatives for sustainable environmental solutions. We collect e-waste (any electrical and electronic equipment including CDs, remote controls, chargers etc.) from students, teachers and staff of the College in a bin installed near the library. The waste is collected and would be given to **Chintan, an environmental NGO** as and when the bin is full. The E-waste was last picked up on 28th October, 2021. Chintan works on waste management and help in providing livelihood opportunities to waste collectors and other stakeholders. According the MoU signed with the NGO, the collected waste would be recycled and processed in an environment safe manner. Members of the College community regularly contribute their waste instead of selling to a scrap dealer (*kabadiwala*). The pictures of the of the bin and waste collected are attached herewith.
